SAMMY NAVA

ASP.NET MVC | C#

SQL | JavaScript | HTML

Full-stack Developer

PROFILE

I have been building software for many years and I love it more with each new line of code I write!
Software development allows me to exercise my problem-solving and communication skills while providing ample opportunities to express my creativity and satiate my thirst for learning.
I invite you to visit my portfolio to get an idea of the skills I can bring to your company, contract, or freelance opportunity.

EXPERIENCE

GloboWeb (freelance)
2001-PRESENT
As a freelance developer, I have created Websites, Web Apps, and desktop applications as well as provided other IT services such as hosting, e-mail, Internet Radio broadcasting, database maintenance, and technical support to various entities. Freelance work has remained a constant through the various phases of my working career.

Trans Tech Software, Inc.
2006-2021
As the MIS Manager for this company, I maintained and enhanced their proprietary, courier software which is used to manage all aspects of a traditional courier service including scheduling, tracking, billing, settlement, fleet maintenance, data import, etc.

Diebold, Inc.
1993-2001
This is where I began my software development career. The division I worked for, Campus Systems, developed its own P.O.S. hardware and software to support student ID, and card-based transactions at major U.S. Universities. I began as a QA technician working closely with the software developers, and under their guidance and mentorship I taught myself C++ and became a junior developer after two years. By the time I left, I was the lead developer for the bookstore module being proficient in C++, SQL, JavaScript, Visual Basic, and Web Forms.

SKILLS

- C#, JavaScript, SQL
- ASP.NET Core
- HTML, CSS, Bootstrap
- JavaScript
- SQL Server, PostgreSQL
- REST API, GraphQL
